

RODENT BAIT 20R

- Is a unique formulation which was developed under collaborative research carried out jointly with our conservation agency partners.
- Has been the common ingredient in a majority of successful rodent eradication operations around the world for more than a decade.
- Has been used successfully in a wide range of latitudes, climates and habitat types throughout the Atlantic, Pacific and Indian Oceans.
- Has positively contributed to pest control and eradication programmes aimed at ecological restoration, crop protection, public health and maintaining quality tourism experiences.
- Is a cereal based pellet containing sweeteners and attractants. It contains 0.002% brodifacoum and is coloured green to reduce its visibility to some non-target species.
- Does not contain any bitter substances such as “Bitrex” which may cause a small percentage of rodents to reject the bait.
- Is available in a range of sizes including 5.5mm diameter 0.6 gram, 10mm/2 gram, 16mm/7 gram and 20mm/12 gram baits.
- Can be packed in the standard 25 kg multi-wall paper bag, in plastic pails, or in other packaging of your preference.
- Can be supplied as a non-toxic formulation for assessing bait uptake by both target and non-target animals, measuring seasonal changes in bait palatability and longevity, and for spreader-bucket calibration.

MORE CHOICES

In addition to giving you a choice of bait sizes, we can offer customers other anti-coagulant or acute toxins in the same bait matrix if necessary.

Block, pellet or paste baits can also be manufactured in other formulations to meet your particular requirements.

The range of Pestoff Rodent Bait 20R sizes available. Non-toxic baits can also be supplied in the same range.

Although Pestoff Rodent Bait 20R is the bait most commonly used for broad scale baiting, Pestoff Rodent Blocks and Pestoff Dead Rat Café bait stations regularly form part of the eradication package.

These chocolate flavoured blocks are extremely effective against both rats and mice and are most often used around human habitation areas where pellet broadcasting cannot be carried out.

Mouse-only bait stations which take blocks or pellet baits are also available.

Pestoff Rodent Blocks inside a Pestoff Dead Rat Café bait station with lid removed. Up to 16 blocks can be loaded into each station.

WE ARE EXPORTERS !

We export many tonnes of rodenticides every year and manage delivery right to the destination port.

Our close relationship with freight agents, customs agencies and shipping companies means that we can land both LCLs (pallet loads) and FCLs (full container loads) of bait in overseas countries at an extremely competitive price. We also manage all the necessary export and packaging documentation to ensure a rapid customs clearance and release of consignments to our customers.

Above: Packing a forty foot shipping container with 14 tonnes of bait for the British Forestry Commission

All full container load orders are packed on our own site and we always take extra care to fit condensation proofing to protect the product from “container rain”.

We provide regular updates to our customers regarding progress with consignment production and delivery. We also give free advice on the best conditions for transport and storage of the bait.

Our Whanganui factory is equidistant from three major New Zealand export ports which ensures regular on-time shipping options can be provided.

BAIT SPREADING CAPACITY

The Pestoff team supplies purpose-built bait spreader buckets, tailor made to suit a particular helicopter or a range of helicopter types. These buckets are suspended on a standard cargo hook harness beneath the helicopter. The bait spreader/spinner is V-belt driven by a 12HP to 15HP petrol motor and the bait flow control is managed by compressed air ram and slide. All bucket to helicopter fittings are aircraft quality and wire-locked for added safety and security.

Quotes can be provided for building and exporting plastic, alloy or stainless spreader buckets of all capacities.

THE COMPLETE PACKAGE

We can supply advice on your baiting projects covering application rates, bucket calibration, baiting strategies, quarantine requirements, bait storage, bait handling, and costs. Our staff have nearly 40 years experience in broad scale vertebrate pest control and eradication operations using aircraft, mechanical ground spreaders and hand baiting. For those clients who require it, we can arrange experienced contractors to plan and undertake operations.
